Find the MAC address for a device

A media access control (MAC) address is a unique code assigned to a device that is 12 characters long. This is typically in the format of 6 two-character blocks (i.e. XX-XX-XX-XX-XX-XX), and will consist of the numbers 0–9 and the letters A–F.

Follow the instructions below for finding out the MAC address for your device.

- **Windows 10**
  1. Click on the Start menu. Type `cmd` and click **OK**.
  2. When the black window appears, type in `ipconfig /all` (please note there is a space between ipconfig and `/`).
  3. Under the title of *Wireless LAN adaptor*, there should be a line that says *Physical address*:

- **Mac OS X**
  1. Launch **Terminal** from the Applications: Utilities folder.
  2. Type the following in to the terminal window: `ipconfig en1` and then press **Enter**.
  3. Mac address is on the line beginning with `ether` or `lladdr`.

- **CISCO Phone**
  1. Please select the **Settings** button on the phone itself.
  2. Navigate down the list to **Network Configuration** and press **Select**.
  3. Navigate down the list to **MAC Address** tab.

- **PS4/Xbox One**
  **PS4**
  1. Go to the **Home** menu of the PS4, then navigate to **Settings**.
  2. Select **System** from the list.
  3. Select **System Information**. You will see your MAC Address listed on this screen.

  **Xbox One**
  1. Navigate to **Settings**.
  2. Select **Network**, then **Network Settings**.
  3. Select **Advanced Settings**. You will see your MAC Address listed on this screen.
